- VS Code, Figma, Varcel, Firebase, Netlify

Projects Details –

1. **Project Name: Old-Laptop Market**
   Live link: https://old-laptop-3f2fb.web.app/
   GitHub client link: https://github.com/azizulhakims/old-laptop
   GitHub server link: https://github.com/azizulhakims/old-laptop-server
   Here I am creating role base system like an admin role, Sellers, and user's role. Users can book a product, and also user goes to their profile to see the booked product list, Admin role can see dashboard all seller and all buyer(user), seller role: a seller can add product with detail an also in dashboard see my product.
   -- Firebase authentication system.
   -- mongoDB database.
   -- Tailwind framework CSS also component library daisyUi.

2. **Project Name: Code-Expert**
   Live link: https://code-expert-69485.web.app
   GitHub client link: https://github.com/azizulhakims/code-expert-client
   GitHub server link: https://github.com/azizulhakims/code-expert-server
   This project create by react.js also here use firebase authentication system, where user can login by google and GitHub, and header also have toggol system for black mode and yellow mode create, this system have a binding you are not user so you can't access get premium access. Here also pdf or print button for course details.
   -- Firebase authentication system add.
   -- daisyUi tailwind framework add for style.

3. **Project Name: Photography Service**
   Live link: https://photography-service-5a35b.web.app
   GitHub client link: https://github.com/azizulhakims/photography-service-client
   GitHub client link: https://github.com/azizulhakims/photography-service-server
   Photography service project create for a photographer who provided photography service, here home page have photography category, you can see detail in service also you can review here. If you not user you are not grant to create review. Here also a admin panel where you can add service.
   --Firebase authentication system, mongoDB databases, tailwind framework, imbb for image upload.
